Hypothesis Testing Summary

Test	Question	Method	H ₀	Decision Rule
Q1	Do Male & Female spend the same?	Two-Sample T-Test	Mean spend Male = Female	Reject H ₀ if p < 0.05
Q2	Does season affect purchase amount?	One-Way ANOVA	Mean equal across all seasons	Reject H ₀ if p < 0.05
Q3	Do subscribers spend more?	One-Tailed T-Test	Subscribers spend ≤ Non-subscribers	Reject H ₀ if p < 0.05
Q4	Is Gender independent of Payment Method?	Chi-Square Test	Gender & Payment Method are independent	Reject H ₀ if p < 0.05
Q5	Is Discount related to Purchase Frequency?	Chi-Square Test	Discount & Frequency are independent	Reject H ₀ if p < 0.05

p-value < 0.05 → Reject H₀ (statistically significant) | p-value ≥ 0.05 → Fail to Reject H₀
